

Interim checklist of King Island birds, July 2015

Margaret Bennett, Nigel Burgess* and Eric J Woehler
BirdLife Tasmania, GPO Box 68 Hobart TAS 7001

An initial list of the birds of King Island was prepared by BirdLife Tasmania in August 2013. The list was derived from Green and McGarvie (1971), records in the BirdLife Tasmania database, reflecting more than 20,000 records from the island, and the authors' observations on the islands. The interim list follows BirdLife Australia's Working List of Australian Birds (version 1.2, available at <http://birdlife.org.au/conservation/science/taxonomy>) but does not use trinomials.

The interim list below currently lists 180 species that have been recorded from King Island, Christmas and New Year Islands off the northwest coast, and Councillor Island off the northeast coast. The list also includes seabirds seen within Tasmanian State Waters that extend to 3 Nautical Miles or approximately 5.5km from shore. A number of species have been recorded on the island since 2013, including an observation of a Scarlet Honeyeater *Myzomela sanguinolenta*, which was the first record for Tasmania. The codes used are: **END**[angered], **EN**[demic], **BR**[eeding], **V**[agrant], **M**[igrant], **EX**[tinct], **IN**[troduced], **R**[are].

We extend our thanks to Mavis Burgess*, and Graeme and Margaret Batey for their comments and assistance (* deceased).
